

Phonotrauma

Phonotrauma is an artwork composed of minimal visual forms and experimental sound, designed as an audiovisual system. The work is built upon the contrast between light and darkness, merging sight and audition into a single perceptual field.

Located at the fragile threshold between wakefulness and unconsciousness, image and sound operate as interdependent forces, generating instability, fragmentation, and physical resonance.

Phonotrauma drives an inward shift of attention — toward introspection, sensory disturbance, and altered states of perception.

Concept

Phonotrauma is composed through a monochromatic visual language combined with experimental sound and low-frequency audio. The reduction to black and white intensifies contrast and tension, allowing minimal elements to generate heightened perceptual responses.

Built from synthesized geometric forms, the visual field functions as the sole source of light. The screen alternates layers of solids, glitches, noise, strobe, and feedback, modulated in real time to disrupt tempo and continuity.

Sound unfolds through drones, pulses, effects, and altered tempos. Dense low frequencies establish a heavy foundation, while intermittent elements introduce instability and variation.

Audio and visuals remain tightly synced, forming a unified audiovisual system. Phonotrauma operates within a perceptual state between wakefulness and sleep, light and darkness.

Installation

Audiovisual installation presented in a fully darkened space.

Phonotrauma can be displayed as a single-screen or multi-screen installation, accompanied by a synchronized sound system.

The work runs as a fixed-duration audiovisual piece or loop, preserving its original temporal structure and perceptual dynamics.

Visual Requirements

Screen – LED screen (Pitch 1 or Pitch 2)

Resolution – Supports up to 4K

Aspect ratio – Wide format recommended (minimum equivalent to 8 m x 2 m)

Audio Requirements

PA System – Professional sound system suitable for the venue

Frequency response – Must support extended low-frequency reproduction

The composition relies heavily on low-frequency content.

Accurate bass reproduction is essential for the correct perception of the work.

Space & Environment

Room – Total darkness required (0% natural or artificial light)

Walls – Black or deep dark surfaces recommended to enhance contrast

Stage – No stage required

Duration – 30 minutes

Warning

This performance contains intense visual contrasts and stroboscopic elements.

It may pose a risk for people with photosensitive epilepsy.

Live Performance

Real-time interpretation of Phonotrauma, where visual and sonic elements are composed and manipulated live. The performance maintains the same conceptual framework, visual language, and perceptual conditions as the installation format, while introducing temporal variation through live execution.

Additional Technical Rider (Live Format Only)

Artist Equipment

(01) Apple MacBook Pro 16"
(01) Moog Grandmother
(01) Akai APC40 MKII
(01) Focusrite Scarlett 6i6

Monitoring

Artist Monitoring – Stereo stage monitors or nearfield monitors

Video Output

(01) HDMI output to LED screen

Audio Outputs

(02) 1/4" TRS balanced outputs to PA system

(DI box or XLR conversion to be provided by the venue if required)

Technical Needs

Desk/Table – 200 cm (W) × 100 cm (D) × 90 cm (H)

Power Supply – 220V, multistandard outlets (EU / US compatible)

Biography

ANORMAL is an audiovisual artist and art director based in Buenos Aires, Argentina. His practice operates at the intersection of sound, graphic design, and digital media, exploring minimal visual systems, monochromatic atmospheres, and expanded states of perception. With nearly two decades of experience across visual arts, music, and technology, his work dissolves boundaries between disciplines, crafting sensorial compositions where image and sound become tools for introspection.

His installations and performances combine abstract motion graphics, low-frequency sound design, and geometric visual languages, often presented in immersive audiovisual environments. These works reflect on consciousness, memory, trauma, and inner transformation, using technology as an active mediator of perception rather than a neutral tool.

Alongside his artistic practice, ANORMAL has worked closely with Artlab and maintains an ongoing relationship with MUTEK AR, contributing to curatorial processes, project development, and collaborative support for artists working across sound and digital media. This involvement has informed a broader understanding of exhibition formats, institutional frameworks, and audience experience.

He is the founder and co-curator of Modular, a platform dedicated to experimental audiovisual practices, and has presented work in institutional and gallery contexts such as Mutek AR, arteba, Artlab, Tecnópolis, and the Salón Dorado of the Buenos Aires Legislature. His work has also been featured in international festivals including Demo Festival (NL), Meta Festival (DE), Graphic Days (IT), and the Biennale Internationale de Design Graphique (FR).

His ongoing audiovisual project Phonotrauma has been presented as both installation and performance, exploring the relationship between sound, light, and altered perceptual states. Through research-based practice and site-sensitive approaches, ANORMAL continues to develop spatial works that challenge conventional distinctions between visual art, sound, and performance.

Works

Phonotrauma.

Audiovisual Performance.
